**Contents 10 L**

## DIRECTIONS FOR USE

### Application Timing

Begin applications prior to damaging heat and radiation conditions (i.e. heat events >28°C and/or high radiation) responsible for crop damage. SolVit® must be applied 3 to 2 days prior to damaging conditions. Multiple applications are generally more effective than a single application. In a program commencing prior to heat events, each application of SolVit will provide protection for approximately 7 days. Continue applications at an interval not greater than 7 days while the risk of damaging heat events persists. Use local weather services for planning application programs. Can be used up to the time of harvest.

CROP	RATE	CRITICAL COMMENTS
Vegetables: Tomatoes and capsicums	1.5 to 2.0 L/ha	Commence applications at early fruit set. The higher rate will provide increased protection. Follow application timing instructions.

## GENERAL INSTRUCTIONS

### Mixing

Shake well before use. Slowly pour SolVit into the spray tank three-quarters filled with water and with agitation running. Alternatively, prepare a pre-mix by adding SolVit in equal parts with water and stir immediately. Add this mixture to the water in the spray tank with agitation running.

### Application

#### Vegetables

Use a spray volume of around 500 L/ha and apply using a medium droplet size. The spray volume should match the canopy size, increasing as the crop grows. Ensure thorough, even coverage of all plant parts.

## COMPATIBILITY

SolVit should be applied alone without a tank-mix partner. AgNova plans to test a range of potential mixture partners with SolVit in Australian crops so that further compatibility guidance can be given to growers in future seasons.

## STORAGE AND DISPOSAL

Store in the closed, original container in a cool (+5°C to +30°C), well-ventilated area. Do not store for prolonged periods in direct sunlight. Triple rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and deliver empty packaging to an approved waste management facility. If an approved waste management facility is not available, bury the empty packaging 500 mm below the surface in a disposal pit specifically marked and set up for this purpose, clear of waterways, desirable vegetation and tree roots, in compliance with relevant local, state or territory government regulations. Do not burn empty containers or product.

## SAFETY DATA SHEET

If additional hazard information is required refer to the Safety Data Sheet.
