METAREX[®]

ALL WEATHER SLUG AND SNAIL BAIT

Perimeter baiting ...

Applying Metarex[®] All Weather Slug and Snail Bait early and before the opening autumn rains can save time and money.

Snails spend the summer resting on posts, stubble, weeds, bushes and other harbourages in order to conserve moisture and survive the dry summer period.

With the approach of autumn however, cooler moist conditions trigger snail activity and movement from their summer resting site to find food and then mate.

Early baiting with an easy-to-apply and irresistible food source will kill snails before they have a chance to mate and lay eggs. Applying Metarex before the opening autumn rains ensures that baits are present and ready to kill as soon as snails begin to move.

Metarex is ideal for early season control because it offers a range of benefits including:

- **Optimised bait:** Metarex kills snails quickly without relying on chance encounter, with an ideal number of bait points at the label rate and up to 3 times the strength of other metaldehyde products.
- **Highly attractive and palatable:** Snails are attracted to Metarex and its unique formulation ensures their appetite for the product.
- **Superior resilience:** Metarex is rainfast, persisting in wet conditions when other baits fall apart or become inactive, and does not need to be reapplied after every rain event. It will also resist the damaging effects of sun and high heat, without crumbling or turning to powder like some other pellets. Metarex is formulated with the active ingredient distributed evenly throughout the bait. If Metarex is visible on the ground, it's still active.
- **Excellent spreadability:** Metarex is uniform in size and has an ideal weight and density to spread evenly over wide areas, then stay where it's put.

Take control of snails before they invade and apply Metarex around fence lines early in the season. This strategy can significantly reduce snail numbers overall and thereby save time and money.

Treating early with Metarex can also eliminate the cost of re-applying other snail baits every time it rains, and may even save the cost of treating the entire paddock later.
